EXPERIENCE

Blueflame AI Jan 2026 – Present

Software Engineer

- Led Blueflame's side of the design to unify accounts with Grata, a sister product with its own backend, so users of either or both kept their existing logins; shipped on the joint launch date.
- Designed write-once account links that reject conflicts instead of overwriting, so a bad match can't attach one person's data to someone else's account.
- Gave every shared field a single owner across the two systems, and let access revocations sync while grants never do, so a sync bug can't hand anyone new access.
- Drove the pushback in cross-team design disputes, cutting a proposed shared user service to three operations and blocking org-mapping changes until paired customers couldn't be relinked.
- Served as Blueflame's primary contact for launch identity incidents, tracing duplicate accounts to a cross-company retry/timeout race by correlating AWS and Datadog logs.
- Designed and shipped Datasite VDR sharing with a fail-closed, least-privilege access model enforced across search, RAG and code execution, rolled out through a staged, dry-run-first production backfill.
- Architected the permission foundation (groups, ACLs, atomic bulk operations) for a new workflow product, validated at 10K items and against production-scale migrations.

PepsiCo Jul 2023 – Jan 2026

Software Engineer, Data Platform

- Built self-service Snowflake provisioning (Jira, GitHub, Airflow), cutting turnaround from 2 days to 1 hour.
- Migrated 200+ service accounts to RSA key auth with zero downtime, backed by automated key rotation in Terraform and Azure Key Vault.
- Served as global Terraform SME, building modules for 5 multi-region Snowflake accounts that cut provisioning time 60%; mentored 15+ engineers.

Software Engineering Intern, Data Platform May 2022 – Aug 2022

- Built pipeline monitoring and alerting in Python and SQL that reduced MTTR by ~40%.

PROJECTS

Snowflake Analytics MCP Server *Python, FastMCP, pandas*

- Built an MCP server with 15+ tools for Snowflake cost, security and anomaly analysis.

Syncify *FastAPI, React, OAuth 2.0*

- Built a Spotify-to-Apple Music migration service with ~95% track match accuracy.

TECHNICAL SKILLS

Languages: Python, SQL
Systems: Distributed systems, system design, access control (RBAC, ACLs), REST APIs, RAG, LLM tooling
Infrastructure: AWS, Azure, Terraform, Docker, Kubernetes
Data: MongoDB, DocumentDB, Redis, Snowflake, dbt, Airflow
Identity: Auth0, OAuth 2.0, OIDC, JWT

EDUCATION

New York University May 2023

B.A. in Mathematics and Computer Science
