TECHNICAL SKILLS

Languages: Python, SQL | **Cloud & Infra:** AWS, Azure, Docker, Kubernetes, Terraform | **Data:** MongoDB/DocumentDB, Redis, Snowflake, DBT, Airflow | **Identity:** Auth0, OAuth 2.0/OIDC, JWT

EXPERIENCE

Software Engineer, *Blueflame AI* **January 2026 – Present**

- Owned the Blueflame side of the Auth0 identity integration with Grata for a cross-company platform launch, going from no Auth0 experience to merged auth PRs in ~9 days: designed the shared-key identity model, a privileged M2M API, a login handoff across 4 repos, and org, user and seat provisioning.
- Served as primary engineer for launch-window identity incidents, correlating AWS CloudWatch and Datadog logs across both systems; sized a production login loop (~1,900 logins at risk), ran the triage call, and traced ~670 duplicate accounts to a retry/timeout race, proposing idempotency keys.
- Shipped Datasite VDR sharing to production on a fail-closed, least-privilege design applied consistently to search, RAG and code execution; closed 3 metadata leaks found in testing and ran a staged backfill (dry run, single-grant pilot, then 142 accounts and ~15K workspaces).
- Built the permission foundation for Blueprints V3 (groups, ACLs, all-or-nothing bulk operations, edit-lock leases), benchmarking 10K blueprints across 15 folder levels and validating migrations on production data.
- Cut a workspace membership query from 90 ms to 0.8 ms with a targeted index and removed a 7–8 s per-member scan; authored 160 PRs across 9 repos in 9 months.

Software Engineer - Data Platform, *PepsiCo* **July 2023 – January 2026**

- Built a self-service data platform integrating Jira Service Management, GitHub webhooks and Snowflake APIs with Airflow orchestration, cutting manual provisioning from two days to under one hour.
- Engineered a Snowflake MCP audit server and a Terraform + Azure Key Vault key-rotation pipeline that moved 200+ service accounts to RSA auth with zero downtime and rotates their keys monthly via CI/CD.
- As global Terraform SME, designed reusable modules for 5 multi-region Snowflake accounts, reducing provisioning time by 60% and mentoring 15+ engineers on adoption.
- Led data platform integration for an acquired brand, consolidating pipelines and enforcing PII compliance through secure hashing.

Software Engineering Intern - Data Platform, *PepsiCo* **May 2022 – August 2022**

- Built a pipeline monitoring and alerting stack (Python + SQL) that reduced MTTR by ~40%.

PROJECTS

Snowflake Analytics MCP Server (GitHub)

- Built a Python (FastMCP) server with 15+ tools for Snowflake cost optimization, security monitoring and anomaly detection, secured with RSA key auth, query validation and schema-level access controls.

Syncify (GitHub)

- Built a Spotify-to-Apple Music migration service with ISRC matching and fuzzy fallback (~95% track match accuracy), OAuth 2.0, rate limiting and fault-tolerant sync for large playlists.

EDUCATION

New York University: B.A. in Mathematics and Computer Science **May 2023**

Relevant Coursework: Probability, Statistics, Linear Algebra, Optimization, Data Structures, Algorithms
