EXPERIENCE

Blueflame AI Jan 2026 – Present

Software Engineer

- Co-owned Blueflame's side of the Auth0 identity integration with Grata for a cross-company launch, delivering SSO login handoff, a privileged M2M API and org, user and seat provisioning across 4 repos.
- Authored the identity RFC (Auth0 as credential, internal accounts as identity) for reversible per-account migration; drove keying both systems on Grata's stable UUID and wrapping the existing login path to avoid regression risk at launch.
- Designed provisioning to enforce US/EU data residency and to write to Grata before saving locally, so a rejected write can never leave an orphaned user.
- Served as Blueflame's primary contact for launch identity incidents: triaged a production login loop affecting ~1,900 logins and traced ~670 duplicate accounts to a retry/timeout race.
- Designed and shipped Datasite VDR sharing with a fail-closed, least-privilege access model enforced across search, RAG and code execution, rolled out through a staged backfill of 142 accounts and ~15K workspaces.
- Architected the permission foundation for Blueprints V3 (groups, ACLs, atomic bulk operations), validated at 10K blueprints and against production-scale migrations.
- Raised the team's review bar: reviewed 47 PRs across both companies, wrote rollout runbooks and API docs for Grata engineers, and built AI code-review tooling that encodes the team's review standards.

PepsiCo Jul 2023 – Jan 2026

Software Engineer, Data Platform

- Built self-service Snowflake provisioning (Jira, GitHub, Airflow), cutting turnaround from 2 days to 1 hour.
- Migrated 200+ service accounts to RSA key auth with zero downtime, backed by automated key rotation in Terraform and Azure Key Vault.
- Served as global Terraform SME, building modules for 5 multi-region Snowflake accounts that cut provisioning time 60%; mentored 15+ engineers.

Software Engineering Intern, Data Platform May 2022 – Aug 2022

- Built pipeline monitoring and alerting in Python and SQL that reduced MTTR by ~40%.

PROJECTS

Snowflake Analytics MCP Server *Python, FastMCP, pandas*

- Built an MCP server with 15+ tools for Snowflake cost, security and anomaly analysis.

Syncify *FastAPI, React, OAuth 2.0*

- Built a Spotify-to-Apple Music migration service with ~95% track match accuracy.

TECHNICAL SKILLS

Languages: Python, SQL
Systems: Distributed systems, system design, access control (RBAC, ACLs), REST APIs, RAG, LLM tooling
Infrastructure: AWS, Azure, Terraform, Docker, Kubernetes
Data: MongoDB, DocumentDB, Redis, Snowflake, dbt, Airflow
Identity: Auth0, OAuth 2.0, OIDC, JWT

EDUCATION

New York University May 2023

B.A. in Mathematics and Computer Science
