EXPERIENCE

Blueflame AI Jan 2026 – Present

Software Engineer

- Co-owned Blueflame's side of the Auth0 identity integration with Grata for a cross-company platform launch, designing the shared identity model, privileged M2M API and login handoff across 4 repositories.
- Wrote the Auth0 RFC that kept internal accounts as the identity and Auth0 as the credential, enabling reversible per-account migration, and pushed to shrink the shared identity API from ~28 methods to 7.
- Drove the decision to link both systems on Grata's stable UUID rather than Auth0 IDs, and wrapped the existing token path instead of rewriting login, removing regression risk before launch.
- Owned org, user and seat provisioning between both platforms, enforcing US/EU data residency and a Grata-first write contract that prevents orphaned users.
- Served as Blueflame's primary contact for identity incidents through launch, running triage on a production login loop affecting ~1,900 logins and coordinating fixes across both companies.
- Root-caused ~670 duplicate production accounts to a retry/timeout race by correlating AWS CloudWatch and Datadog logs, and proposed idempotency keys to prevent recurrence.
- Designed and shipped Datasite VDR sharing with a fail-closed, least-privilege access model enforced across search, RAG and code execution, rolled out through a staged backfill of 142 accounts and ~15K workspaces.
- Architected the permission foundation for Blueprints V3 (groups, ACLs, atomic bulk operations), validated at 10K blueprints and against production-scale migrations.

PepsiCo Jul 2023 – Jan 2026

Software Engineer, Data Platform

- Built self-service Snowflake provisioning (Jira, GitHub, Airflow), cutting turnaround from 2 days to 1 hour.
- Migrated 200+ service accounts to RSA key auth with zero downtime, backed by automated key rotation in Terraform and Azure Key Vault.
- Served as global Terraform SME, building modules for 5 multi-region Snowflake accounts that cut provisioning time 60%; mentored 15+ engineers.

Software Engineering Intern, Data Platform May 2022 – Aug 2022

- Built pipeline monitoring and alerting in Python and SQL that reduced MTTR by ~40%.

PROJECTS

Snowflake Analytics MCP Server *Python, FastMCP, pandas*

- Built an MCP server with 15+ tools for Snowflake cost, security and anomaly analysis.

Syncify *FastAPI, React, OAuth 2.0*

- Built a Spotify-to-Apple Music migration service with ~95% track match accuracy.

TECHNICAL SKILLS

Languages: Python, SQL
Infrastructure: AWS, Azure, Terraform, Docker, Kubernetes
Data: MongoDB, DocumentDB, Redis, Snowflake, dbt, Airflow
Identity: Auth0, OAuth 2.0, OIDC, JWT

EDUCATION

New York University May 2023

B.A. in Mathematics and Computer Science
